Rich Communication Services (RCS)

For many years, Over-The-Top (OTT) services have led to a significant decrease of mobile (and fixed) networks operator's revenue all around the world. Being flexible, quick to innovate and quick to market, many of OTT players have turned into billion-dollar service providers.
Network operators, often reliant and bound to both technical and administrative specifications, face significant challenges. Often too slow and far behind the drag curve, network operators risk being turned into mere "bit-pipe providers" without adopting to the new environment.

Course objectives:

This training aims at discussing the challenges network operators facing in respect to OTT services and providing potential solutions by introducing RCS (Rich Communication Services).
We will explore the differences between services provided by Apps from App stores and RCS to detail the benefits of the RCS approach.

With focus on standardization, architectural requirements and technical solutions, the training will equip participants with a solid foundation for using RCS to define new services and aid in their implementations.

Duration Instructional methods:

Option 1: On-Site Training: 2 days,
Classroom-style lecture using Power-point slides with interactive discussion,
Questions & Answers after each module.

Option 2: Virtual Classroom: 2 days total with 4 x 1.5 hours per day

Option 3: Virtual Classroom: 4 days total with 2 x 1.5 hours per day

Upon successful registration participants will receive dedicated LMS account credentials, allowing access to pre-training documents and eLearning material.
All participants will also receive comprehensive course materials.

Target Audience:

The training is designed for engineers, managers and network operator's staff who require a solid foundation in RCS to shape successful services.
Service providers and software developers will appreciate the technical background, enabling a closer cooperation with network operators.
It will also benefit to those in the wider technical community who have the need to understand the Rich Communication Services, its features and capabilities.

Rich Communication Services (RCS)

Course Contents:

- Drivers for Rich Communication Services
- Why RCS? Don't we have Apps for Android / iOS?
- Standardization work
- RCS architecture
- RCS Protocols
- Role of IMS (IP Multimedia system) in RCS
- RCS prerequisites and initial procedures
- RCS Services:
    - 1-to-1 Messaging
    - Standalone Messaging
    - 1-to-1 Chat
    - Group Chat
    - File Transfer
    - Geolocation Push services
    - Audio Messaging
    - Chatbots

Pre-requisites:

Attendance to this training assumes a solid understanding of mobile and fixed network architectures and the traditional approaches to deliver services to subscribers.
An understanding of SIP and DIAMETER protocols used in Mobile and IP Networks would be an advantage as would be basic understanding of SIP signaling concepts.
